Maximize
fuel efficiency
and reliability
with a service contract

Service contracts make your work more profitable

Optimize uptime and energy use for your mobile air compressor

As versatile as our mobile air compressor range is, high fuel costs and downtime will always be an important brake on potential profits. Proven to provide substantial **efficiency optimizations, cost savings and carbon footprint reduction**, as well as total peace of mind, Atlas Copco service contracts will grant you the best possible business' performance!

How we make all the difference for your operations

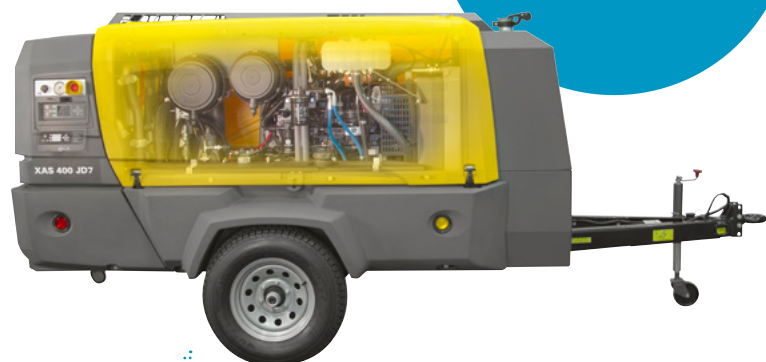

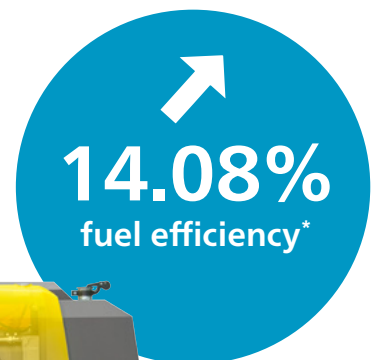

- Using **original Atlas Copco spare parts** will avoid pressure drops, increased energy consumption, or breakdowns, since non-genuine one-size-fits-all components are just not designed for your specific equipment. Due to corrosion and other unwanted results they can lower the efficiency of your investment and even cause damage to it.
- Driven by a thorough understanding of your machine, solid training and years of experience, **service by Atlas Copco expert technicians** will assure the most appropriate, efficient and proactive maintenance.

POTENTIAL SAVINGS EXAMPLE: XAS 400

 = 34,948 km in an average diesel passenger car or

 = 10 acres of US forest needed to capture this CO₂ in 1 year**

- Fuel Consumption : 30 l/hr
- Running hours: 750 h/year
- Diesel Cost: €2/ltr

Make

calculations!

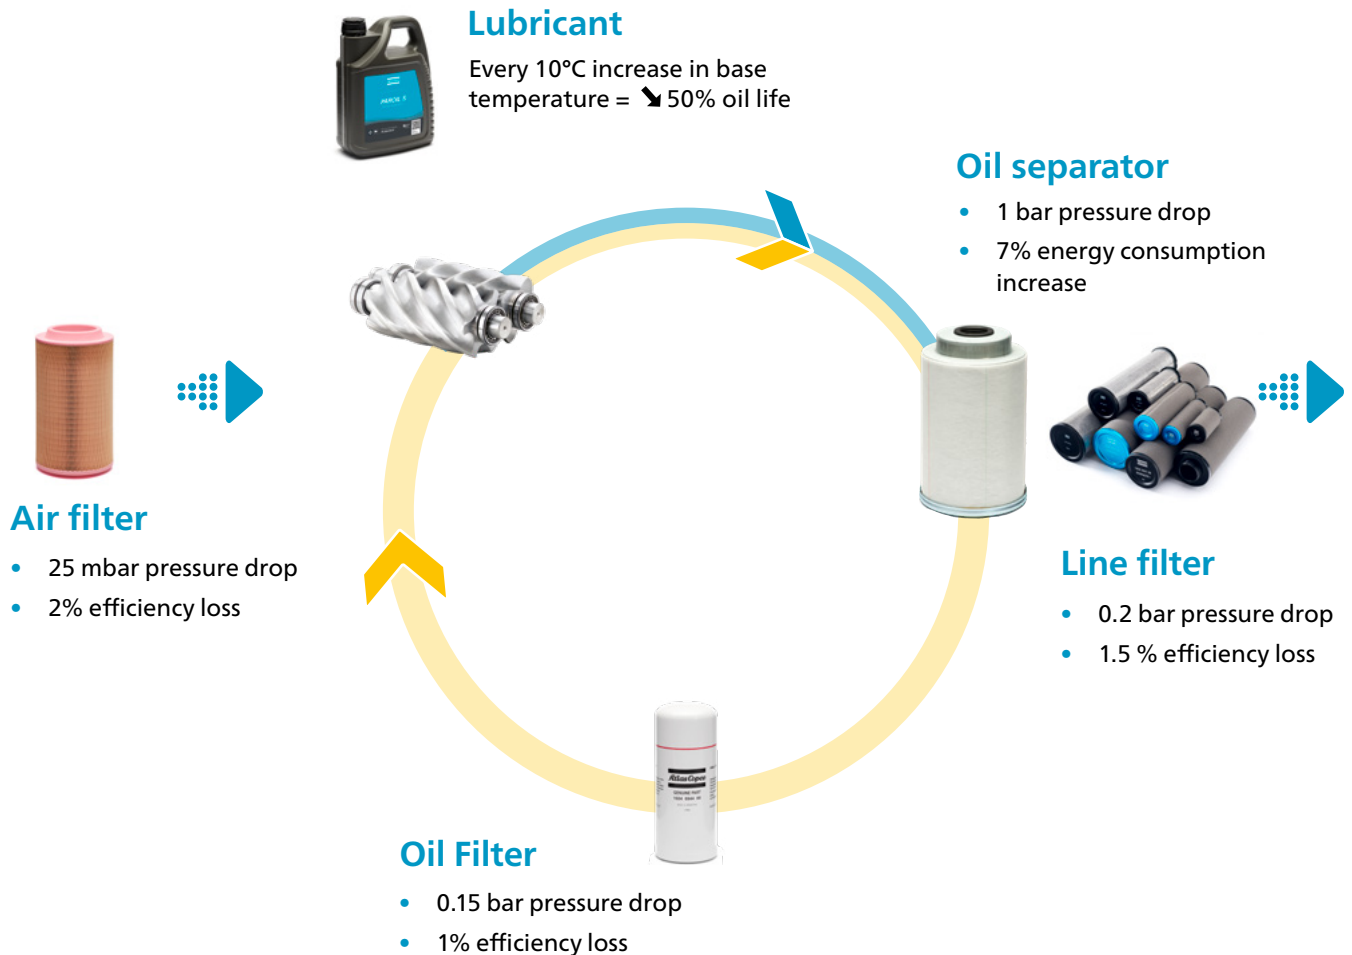

*Based on a FleetLink connectivity modules data comparison as calculated on 31 July 2023.

**According to epa.gov data.

Only genuine Atlas Copco parts and service can avoid the loss of efficiency and profits

Impurities in the inlet air, high oil content in the air leaving the compressor or a lack of oil to seal the clearances and absorb contaminants can cause efficiency reductions or even the failure of your machine.

Original Atlas Copco parts and maintenance by expert technicians will prevent unwanted pressure drops and temperature rises, resulting in lower fuel consumption and higher efficiency.
